Abstract of JP 11322511 (A)

PROBLEM TO BE SOLVED: To obtain an insecticidal composition having an excellent lethal effect with a low concentration by including tetrahydrofuranylmethylamine derivative, and cyphenothrin or emperthrin as an active ingredient.

SOLUTION: This insecticidal composition contains (A) at least one of a (tetrahydro-3-furanyl) methylamine derivative of the formula (X1 to X7 are each H or a 1-4C alkyl; R1 is H, a 1-5C alkyl or the like; R2 is H, an amino or the like; Z is =N-NO2 or the like), and (B) at least one of (i) (RS)- α -cyano-3-phenoxymethyl (1R)-cis,trans-chrysanthemate (cyphenothrin) and (ii) (E)-(RS)-1-ethynyl-2-methylpent-2-enyl (1R)-cis,trans-chrysanthemate (emperthrin), as an active ingredient. The mixing ratio of the components A to B is preferably (500:1)-(1:500) expressed in terms of the weight.
